ABOUT

Since I started working with IT I've been interested in programming, I decided to enter the area for good in mid-2021, I started studying on my own, at first I ended up choosing to walk the Front-end path, but my goal is to be a **FULLSTACK** developer. I started with the basic fundamentals, I took the four HTML and CSS modules from Professor Gustavo Guanabara, then I took Bonieky Lacerda's HTML and CSS course and to close the basic content I took the Front-end course at SENAI. With more than 800 classes and several static projects I was able to go to the next level, I currently study Javascript and Typescript in courses - Luiz Otávio Miranda from Udemy and Bonieky Lacerda | B7Web, my next goal as soon as I consolidate myself in these languages is to learn some library like ReactJs and move forward.

COMPLETED COURSES

JavaScript – Gustavo Guanabara | Curso em vídeo (2023)

First course I took in the JS language, it was a 40-hour course where I was able to learn really cool concepts like functions, variables, operators, loops, conditions, arrays, a little bit about objects, etc. We also had several exercises to put all this into practice.

Trail HTML e CSS 160h Modules I, II, III e IV – Gustavo Guanabara | Video course (2021 - 2022)

It was the best introductory course to basic Front-end languages I've ever taken, without a doubt Gustavo Guanabara is one of the best teachers when it

comes to a first contact with the language, throughout the modules I learned how to completely develop a website static, applying techniques such as mobile first.

HTML, CSS and Javascript – Bonieky Lacerda | B7Web (2021 - 2022)

A very complete and more in-depth course in introductory Front-end languages, there were more than 260 classes where we applied several projects such as **Awax**, **Medicenter** and **Starbucks** with some Javascript functions to make the famous hamburger menu, very present in current mobile screen projects.

Introduction to Front-end – SENAI (2022)

Very interesting introductory course to Front-end for only 20 hours, basically speaking the course gives you a trail of languages for a career in front-end and some practical exercises in HTML and CSS, finally we finish the course with a landing page project.

ONGOING COURSES

Javascript e Typescript - Luiz Otávio Miranda | Udemy (2022 – 2023)

In this first module of the course, I could already see several things such as declaration of variables, functions, repetition structures, among others related to technology.

Javascript – Bonieky Lacerda | B7Web (2022 – 2023)

Studying together with Javascript and Typescript because as they are different teachers and platforms there is something that one always completes the other, so I am advancing quickly and efficiently without leaving anything behind.

LANGUAGE

Portuguese – Native
Inglês - Reading and writing
Spanish - Intermediary

ACADEMIC EDUCATION

Analysis and systems development
CRUZEIRO DO SUL
2021 - 2023 (In progress)
